# Housing Affordability Indicators

## **Housing Affordability in Northern BC**

Home ownership in most of northern British Columbia remains very affordable, especially when compared with the Vancouver region. The aggregate Housing Affordability Indicator (HAI) for northern BC for 2021 is 27.8%, a 1.7 percentage point increase over the 2020 HAI. Despite a 3-year trend towards greater affordability in the Lower Mainland, home ownership in Northern BC remains markedly more affordable (27.8%) than in the Vancouver Area (93.1%).

## **Affordability by community**

Affordability worsened in 2021 in all measured northern BC communities. Prince Rupert, 100 Mile House, Quesnel, and Terrace all recorded significant deterioration, with affordability worsening by more than 10%. Fort St John, Smithers, and Williams Lake recorded the smallest reductions in affordability. In terms of home ownership, 100 Mile House remains the least affordable community in northern BC. In 2021 the HAI for 100 Mile House was 51.8%. This is the chiefly result of median household income in 100 Mile House being markedly lower than that of other communities in Northern British Columbia.

Fort St. John remains the only community in Northern BC reporting steady improvements in affordability over the reference period. Fort St. John recorded the most affordable HAI (19.6%) in Northern BC in 2021 as it did in 2020 and 2019. This is largely due to slow growth in house prices coupled with the highest median household incomes of measured communities.

## **The role of house prices**

The HAI depends on both income and costs. Those communities with high median family incomes will, for a given set of costs, reflect a better (more affordable) HAI. Historically, the largest cost contributor to annual changes in affordability has been house prices, and this trend continues for 2021. Mortgage costs, which are based on house prices and interest rates, tend to comprise between 70% and 80% of the costs included in the HAI. It is therefore not surprising that higher house prices tend to reflect lower affordability.

## **About the Housing Affordability Indicator**

The BC Northern Real Estate Board (BCNREB) Housing Affordability Indicators estimate the proportion of median household income required to cover the major costs associated with home ownership for homes purchased in a particular year. These include mortgage costs, municipal taxes and fees, and utilities for the average single-family home. The higher the measure, the more difficult it is to afford a home. For example, an affordability measure of 30% means that home ownership costs, including mortgage payments, utilities, and property taxes for a given year take up 30% of a typical household's pre-tax annual income.

This edition of the Housing Affordability Indicators for northern British Columbia includes some minor changes to the HAI for 2019 arising from data revisions to Utility Costs for that year.

It is worth noting that the HAI is a snapshot of housing affordability for a given year based on best available data. Reliable community-based income data is available only from the Census taken every 5 years. Indicators of the growth of income by community lag by two years. This means that the impacts of, for example, curtailments in the forest sector, may not be accurately captured in the year in which they occur. Nevertheless, the HAI is an *indicator* of affordability, and as such provides a reasonable measure of housing affordability by community.

# Housing Affordability Indicators

2021 Indicators: Percent of median household income needed to finance home ownership

100 Mile House 51.8%	Fort St. John 19.6%	Kitimat 21.5%	Prince George 32.3%	Prince Rupert 32.2%
Quesnel 29.4%	Smithers 29.2%	Terrace 33.0%	Williams Lake 29.3%	Northern BC 27.8%

According to the Canada Mortgage and Housing Corporation, "... housing is considered "affordable" if it costs less than 30% of a household's before-tax income."<sup>1</sup>

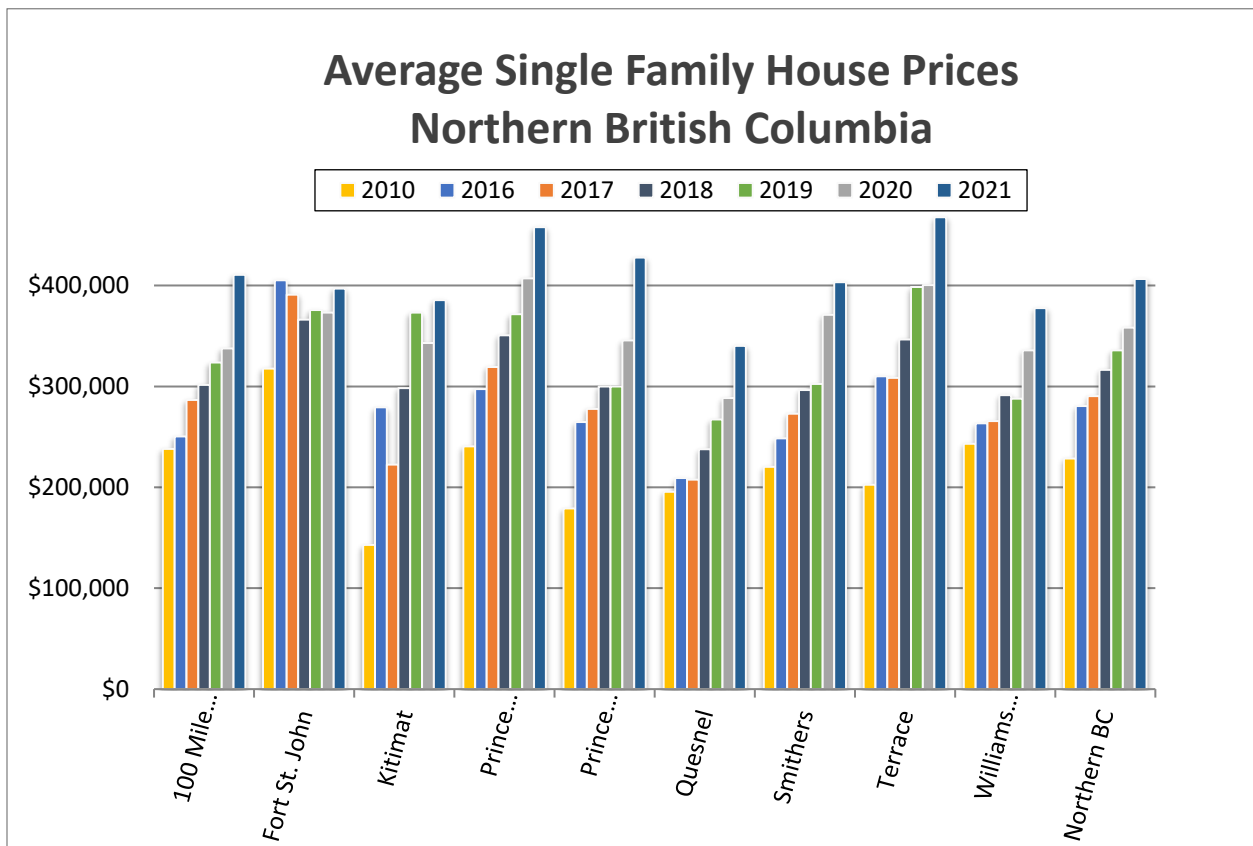

**Notes:**

Northern BC is comprised of the: Bulkley-Nechako, Cariboo, Fraser-Fort George, Kitimat-Stikine, North Coast and Peace River Regional Districts and the Northern Rockies Regional Municipality.

Measures of affordability for single-family detached homes for Vancouver area and Victoria are an average of the quarterly Housing Affordability Measure drawn from RBC Economic Research reports.

# Housing Affordability Indicators

## Variable price growth

In all measured communities, the average price for a detached single-family home in northern BC increased in 2021 over 2020. For most communities, the increase was significantly greater than in recent years. The average price in northern BC in 2021 was \$406,535, a 13.5% increase over 2020 prices.

Prices in 2021 varied widely from community to community. 100 Mile House saw the largest increase, of 21.6%, to \$410,600. Terrace recorded the highest average sales price at \$467,492.

For the first time, no community in this study recorded average house prices below \$300,000. Five communities recorded average house prices greater than \$400,000 in 2021, compared to just two communities in 2020.

Quesnel retains the lowest house prices in northern BC. While prices increased by 17.9%, in 2021 the average sale price in Quesnel was \$340,028 – almost 10% lower than Williams Lake, the community with the second-lowest average house prices (\$377,584).

# Housing Affordability Indicators

## Methodology

The methodology for constructing the Housing Affordability Indicators for northern BC is based on the construction of the RBC Housing Affordability Measures. The northern BC Indicators provide a measure of the relative costs of home ownership by calculating the proportion of median household income required to service the cost of local taxes and user fees, utilities, and mortgage payments for the average-priced detached single-family home on a lot of one acre or less.

## Median Household Income

Benchmark data for median household income are drawn from the 2016 Census of Population which provides income information for the year 2015 by community and region. Median income for northern BC is a weighted average of communities in the region. Median household income is adjusted by the growth rate for average weekly earnings for British Columbia to estimate income in years following the 2015 benchmark year. Average weekly earnings are obtained from CANSIM tables on the Statistics Canada website.

## Utility Costs

Benchmark data for 2015 are drawn from Statistics Canada's Survey of Household Spending for British Columbia. There is no sub-provincial breakdown of utility costs, which include, electricity and other fuel costs. Water costs are generally captured in municipal utility user fees. Estimates beyond 2015 are obtained by using growth rates for the CPI component covering water, fuel and electricity. An estimate for the growth in the Consumer Price Index for British Columbia excluding Vancouver and Victoria is calculated based on an arithmetic average for the CPI component for BC, Vancouver, and Victoria. Data for these component CPIs are obtained through CANSIM from Statistics Canada.

## Community Selection

Communities with an average of at least 75 detached single-family home sales per year over the period 2016 through 2021 are selected for inclusion in the report.

# Housing Affordability Indicators

## Municipal Taxes and User Fees

Local government statistics, including data for municipal taxes and user fees are obtained from the Infrastructure and Finance Branch of the Ministry of Municipal Affairs and Housing. An estimate of municipal taxes is calculated by applying the residential tax rate to the average sale price for the community. Tax rates for northern BC are calculated as weighted averages based on total sales. Tax estimates do not account for the Home Owner Grant available in British Columbia. Representative user fees are drawn directly from the data. User fees for the northern BC composite are based on average user fees by community, weighted by house sales.

## Other Costs

Other costs that may be incurred in the purchase of a home, but are not included in the indicators, include:

Lawyer or Notary Fees & Expenses	Survey Certificate and/or Title Insurance
- searching title	Costs of Mortgage, including:
- investigating title	- mortgage company's Lawyer/Notary
- drafting documents	- appraisal, if applicable
Land Title Registration fees	Home/Property Inspection
Sales Tax (if applicable)	Fire Insurance Premium
Property Transfer Tax	Well test
General Sales Tax	Septic test

## House Prices

Average house prices for each region are derived from the BCNREB MLS® database system. The representative house is defined as a detached single-family dwelling on a lot size of 1 acre or less.

## Mortgage Costs

Mortgage costs are based on the average house price, with 25% down and amortization over 25 years at a 5-year fixed mortgage rate. The mortgage rate is based on Bank of Canada monthly data for a 5-year conventional mortgage. Annual rates are calculated as an arithmetic average of the 12 monthly rates for each calendar year.
